Canadian Data Report of Fisheries and Aquatic Sciences

These reports provide a medium for filing and archiving data compilations where little or no analysis is included. Such compilations commonly will have been prepared in support of other journal publications or reports. The subject matter of Data Reports reflects the broad interests and policies of the Department of Fisheries and Oceans, namely, fisheries management, technology and development, ocean sciences, and aquatic environments relevant to Canada.

Numbers 1-25 in this series were issued as Fisheries and Marine Service Data Records. Numbers 26-160 were issued as Department of Fisheries and the Environment, Fisheries and Marine Service Data Reports. The current series name was changed with report number 161.

The correct citation appears above the abstract of each report.

Rapport statistique canadien des sciences halieutiques et aquatiques

Ces rapports servent de base à la compilation des données de classement et d'archives pour lesquelles il y a peu ou point d'analyse. Cette compilation aura d'ordinaire été préparée pour appuyer d'autres publications ou rapports. Les sujets des Rapports statistiques reflètent la vaste gamme des intérêts et politiques du Ministère des Pêches et des Océans, notamment gestion des pêches, techniques et développement, sciences océaniques et environnements aquatiques, au Canada.

Les numéros 1 à 25 de cette série ont été publiés à titre de Records statistiques, Service des pêches et de la mer. Les numéros 26-160 ont été publiés à titre de Rapports statistiques du Service des pêches et de la mer, Ministère des Pêches et de l'Environnement. Le nom de la série a été modifié à partir du numéro 161.

Le titre exact paraît au haut du résumé de chaque rapport.

FOREWORD

The need for a compendium of selected economic, demographic and social information on fishing communities had been realized for some time in assessing the impact of and/or need for public investment in the primary and secondary fisheries in the Scotia-Fundy Region, in infrastructure and in alternative fisheries management programs. This information previously had to be assembled, as needed, from several sources, covering different time periods and different geographical or population segments. The need for the systematic compilation of this information was further high-lighted in the Report of the 1982 Task Force on Atlantic Fisheries. This report will thus serve to meet those needs, as well as, provide useful information to evaluate policy in these several areas.

Every effort has been made to reproduce accurately the relevant information from the various sources acknowledged in Sources of Information. It is anticipated that the basic information contained in the Community Profiles will be updated to coincide with the release of Statistics Canada's Census.

Scotia Fundy Region
Department of Fisheries & Oceans

ABSTRACT

Raymond, J.L., editor. 1985. Scotia-Fundy Region fishing community profiles. Can. Data Rep. Fish. Aquat. Sci.540:461p.

This report contains 112 profiles of fishing communities which, in the aggregate, comprise more than 400 place names. It provides a compendium of socio-economic and fisheries information compiled from Statistics Canada's Census and Administrative Data Development Division, data gathered by a Department of Fisheries and Oceans survey of fishing communities, and other unpublished material collected by the Licensing Unit, Statistics Division and Economic Development Division of the Department of Fisheries and Oceans Scotia-Fundy Region. All data are for 1983 with the exception of those deriving from the 1981 Census of Canada. The profiles are presented in a standardized format which includes, for each community, an inventory of selected infrastructure and services, and basic information covering the population, labour force activity and income, commercial fishermen, fishing vessels and licenses, fish landings, processing plants and their products.

RESUME

Raymond, J.L., editor. 1985. Scotia-Fundy Region fishing community profiles. Can. Data Rep. Fish. Aquat. Sci.540:461p.

Ce rapport inclut 112 profils de communautés de pêche qui, désagrégés, comprennent au-delà de 400 noms d'emplacements. Il donne un abrégé de données sur les pêche recueillies par les directions des permis, de la statistiques et du développement économique, toutes de la Région Scotia-Fundy du Ministère des Pêches et Océans. De plus les divisions de l'exploitation des données administratives et du recensement de Statistique Canada ont fourni certaines données socio-économiques. Toutes les données se rapportent à l'année 1983 sauf celles qui proviennent du Recensement du Canada de 1981. Les profils sont présentés en format standardisé qui incluent, pour chaque communauté, un répertoire de l'infrastructure et des services ainsi que certains reseignments de base sur la population, le revenu et les activitées de la main-d'oeuvre, les pêcheurs commerciaux, les bateaux et permis de pêches, les débarquements de poisson, et les usines de transformation et leurs produits.

PREFACE

The communities described in this report were defined in two stages. The initial stage was the identification of 167 units for a survey of fishing communities designed by Tom Poetschke of the Economic Policy Branch, Department of Fisheries and Oceans, Ottawa. The survey was carried out in co-operation with the Economics Branch and the Fisheries Operations Branch of the Scotia-Fundy Region during the spring and summer of 1984. Boundary lines were identified by Departmental area personnel from their knowledge of local community definitions and were confirmed or adjusted at the time of the survey according to the views of key informants interviewed in each community. The emphasis was on small fishing settlements; places with populations over 10,000 were excluded.

A second stage was required to link the Department's community survey data with Statistics Canada's census information, collected by enumeration area. Each community was included within the appropriate enumeration area. In some cases it was necessary to combine several communities to obtain the closest possible correspondence between enumeration area and fishing community boundary lines. As a result, the original number of 167 communities was reduced to 112. These communities do not, in every case, coincide with the enumeration areas. However, in these cases, the population within each community accounts for the majority of the respective enumeration area population.

Statistics Canada's administrative data for places identified by postal code were aggregated to coincide with community postal codes. Similarly, unpublished Departmental data were combined by postal code or place name, to coincide with the defined community boundaries. It should be noted that commercial landings in species categories which account for less than 0.6 percent of the total weight or value landed within the community are not shown in the profiles.

Economics Branch personnel participating in the compilation of the community profiles were: Elaine Myers, Sharon Sandall, Gerard MacDonell and Penelope Edmonds.
